

Test triple: <domestic cat, type of, cat> (true)

Condition

Prompt formation (positive instance)

Isolates

A • baseline
names, no types

Is this true: **domestic cat** type of **cat**?

the published
recipe

S • permuted
names reassigned

Is this true: **light breeze** type of **inborn error of metabolism**?
real words, real vocabulary — only the assignment to nodes is destroyed

name-to-node
binding

B • anonymised
opaque ids

Is this true: **entity14008** type of **entity8129**?

entity surface
form

C • anon + types
type tags added

Is this true: entity14008 [**member holonym : head**] type of
entity8129 [**type of : tail**]?

can types
replace names?

D • hard neg.
type-consistent
corruption

the positive is unchanged. Only the NEGATIVE differs:
A-C: ... type of **daydreamer** — drawn at random, easy to reject
D : ... type of **craft** [**type of : tail**] — same tag as the true answer

negative
hardness

G • real + types
names kept

Is this true: **domestic cat** [**member holonym : head**] type of
cat [**type of : tail**]?

do types help
when names do?

E • many neg.

as D, with 6 negatives per positive — the model collapsed to “No” on all 2000 test triples

negative count
